EXPERIENCE

Frontend Developer

I have experience in developing user interfaces for web applications and websites using HTML, CSS, and JavaScript. My expertise includes building a variety of responsive web applications and websites, ensuring that they function well across multiple devices and browsers. Additionally, I have implemented various third-party libraries to optimize performance.

ReactJs

I have extensive experience with ReactJS and have developed single-page applications, reusable UI components, and user interfaces using Recoil and styled-components.

VueJs

I have experience working with Vue.js, developing a diverse range of user interfaces and comprehensive single-page applications. My expertise also includes the latest versions of Vue.js and its related libraries and frameworks such as Pinia and PWA.

Personal Project

Throughout the years, I've dabbled in many side projects using different technologies, and I've gained a lot of knowledge from the experience. One of the things I've learned is how to use Git for version control. I've also discovered a few third-party libraries that have made the development process much easier for me.

GOALS

I always try to learn new things and improve my skills. And whenever I learn something new, I do my best to apply it in real life situations.
